

GO-TO-MARKET STRATEGY

Project Conquer

The strategy to capture the "Wealthy International" student market through radical transparency and neighborhood intelligence.

| Executive Summary

The Opportunity

The UK PBSA market is supply-constrained (98% occupancy), creating a "Landlord's Market" where discovery is fragmented and agent-led. Wealthy international students face high anxiety and low trust, relying on opaque commission-based agents.

The Solution

A **Discovery-First Platform** (Chatbot + Map) that aggregates 100% of the market (not just paid listings). We win by offering "Concierge-Grade" intelligence for free, monetizing the ecosystem (Guarantors, FX) rather than the booking.

Strategic Pillars

1. Radical Neutrality: No steering students to "high commission" buildings.

2. Hyper-Local Insight: "Vibe" and "Safety" data over simple specs.

3. Ecosystem Monetization: Revenue via high-margin affiliates (Housing Hand, Wise).

| Market Diagnosis: The Trust Gap

Why existing portals fail the premium international student.

The Liquidity Paradox

Investment is at record highs (£3.8bn), but inventory is scarce. Operators don't need help "filling beds," so they don't pay for portal listings. This leaves portals with incomplete data.

Agent Opacity

Traditional agents steer students toward properties with the highest commissions (10-15%), often hiding better, cheaper, or safer options that don't pay fees (e.g., University Halls).

The "Blind Buy"

International students book 12-month contracts (~£20k value) without visiting. They are terrified of scams, unsafe areas, and "render vs. reality" discrepancies.

| Target Persona: The "Prestige International"

"The Anxious High-Net-Worth"

Demographic: Chinese & Indian students attending Russell Group London unis (UCL, LSE, Imperial). Family funded.

Psychographics: Prioritizes safety and status over price. Terrified of making a "wrong" choice.

Xiaohongshu User

Safety First

Requires Guarantor

Mobile First

Decision Drivers

- ✓ **Safety Assurance:** "Is it safe to walk home at 2 AM?"
- ✓ **Social Proximity:** "Where do other [Nationality] students live?"
- ✓ **Convenience:** "I need a guarantor, bedding, and bills sorted."

| Differentiation: The "No-Agent" Advantage

How we win against incumbents like Student.com and Amber.

Feature	Incumbents (OTAs)	Our Platform
Inventory Source	Only "Commission Paying" partners	100% of Market (Scraped)
Business Model	Booking Commission (Adversarial)	Affiliate Ecosystem (Neutral)
Data Focus	Price & Availability	Safety, Vibe & Lifestyle
User Goal	"Book a Room"	"Plan a Move"

| The Solution Interface

1. AI Concierge

Natural Language queries: "Find me a quiet studio near UCL with 24/7 security."

2. Intelligence Map

Visualizes "Safety Heatmaps," commute times, and amenity density (e.g., Asian supermarkets).

3. Direct Handoff

Neutral redirect to the operator's site. We don't gate the transaction; we facilitate it.

| Conquer Strategy: The Roadmap

A phased approach to building awareness, trust, and scale without a sales team.

PHASE 1: AWARENESS

Viral Utility

- **Goal:** Traffic & Data
- **Focus:** "Shock" content & Maps
- **Metric:** 5k Unique Visitors

PHASE 2: TRUST

Deep Validation

- **Goal:** Retention & Referrals
- **Focus:** "Trojan Horse" Guides
- **Metric:** 20% Repeat Rate

PHASE 3: SCALE

Ecosystem Lock-in

- **Goal:** Revenue
- **Focus:** Paid & Partnerships
- **Metric:** £1k/mo Affiliate Rev

| Phase 1: Viral Discovery (Weeks 1-4)

Objective: Break the "Boring" Mold

We cannot compete on "listings." We compete on "Intel." We use short-form video to expose the reality of student housing.

📣 The "Rent Shock" Campaign

Comparison videos: "What £300/wk gets you in London vs. Shanghai." High engagement, driving traffic to our "Effective Rent Calculator."

Primary Channels

🎵 **TikTok / Reels:** Focus on visual "Safety Checks" of popular neighborhoods. (e.g., "Is Camden safe at night?")

📖 **Xiaohongshu (Red Book):** Post highly detailed "Vibe Checks" of specific buildings using the map interface screenshots.

KPI: 1,000 Map Interactions

| Phase 2: Trust & Consideration (Weeks 4-8)

Converting viral traffic into trusted users through "Trojan Horse" utility.

Offer Holder Groups

The Tactic: Infiltrate University WhatsApp/WeChat groups. Do not spam links. Answer questions using the tool's data.

Example: "I checked the safety map for Chapter Kings Cross, it's actually rated 4/5..."

"Uncut" Reality Tours

The Tactic: Long-form (10+ min) unedited walking tours from the tube station to the reception. Counters "Render Fatigue."

Value: proves we visit the sites, unlike generic agents.

Student Ambassadorship

The Tactic: Recruit 5 "micro-influencers" (students already at UCL/LSE). Pay them per "Day in the Life" video showing their commute.

Goal: Social Proof from peers, not salespeople.

| Phase 3: Scale & Revenue (Weeks 8-12)

Objective: Monetize the Ecosystem

Now that we have trust, we introduce the "Solution Stack." We don't just find the room; we facilitate the move.

🔍 **Long-Tail SEO:** Target "Safe student accommodation near [Specific Uni]" keywords. Capture high-intent search traffic.

🔗 **Strategic Affiliates:** Integrate "Housing Hand" (Guarantor) and "Wise" (FX) directly into the chat flow.

| Content Pillars

What we say to cut through the noise.

The "Safety" Pillar

"Don't rent in X postcode until you see this map."

Leverages parental anxiety. Uses police crime data overlays to provide objective truth.

The "Financial" Pillar

"The Hidden Costs of London PBSA."

Exposes "Headline Rent" vs. "Effective Rent."
Guides on utility bills and council tax exemptions.

The "Reality" Pillar

"Render vs. Reality: Chapter Spitalfields."

Side-by-side comparisons of marketing photos vs. actual user photos. Builds immense credibility.
